PROJECTS COMPLETED

- 1.5 Years: Created themes from scratch using php language, Divi page builder, Contact form 7, wpforms, Woocommerce and Mysql as database and deployed to wpengine.
- 1 Year: Created themes from scratch using ACF pro, Elementor page builder, Contact form 7 and Mysql as database and deployed to siteground.
- 6 Months: Created Web application using Django as python framework for backend, React framework for frontend and Postgresql for database. The application is integrated in React using REST API generated from Django Rest Framework. This application is platform for advertisement of all news, information of events, businesses and Professional services
- 1 Month: Developed website in WordPress. It's website for a staffing company. Created theme from scratch using page builder Elementor for front-end design, PHP for backend and MySQL as database. Theme includes WPML for enriching multilingual features and Yoast SEO for search engine optimization. Developed plugin to know the employee status regarding their work status - busy, free along with the timeline. It provides an overview regarding when the employee will be busy with their work and when he or she will be free. This allows pre-planning to schedule a new task or project to the related employee after the assigned task is done. The plugin also has a feature to generate the resume of an employee based on available employee information in the system.
- Since - July 1, 2022 (5 Months):
